

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

2. Once the problem is identified, the next step is to define the objectives and goals of the project. This helps to clarify what needs to be achieved and provides a clear direction for the team.

3. The third step is to develop a plan or strategy to address the problem. This involves breaking down the problem into smaller, manageable tasks and determining the resources needed to complete each task.

4. The fourth step is to implement the plan. This involves putting the strategy into action and monitoring progress. It is important to communicate regularly with the team and stakeholders to ensure everyone is on track.

5. The fifth step is to evaluate the results of the project. This involves comparing the actual outcomes with the objectives and goals. It is important to identify any areas for improvement and learn from the experience.

6. The final step is to report on the project. This involves documenting the results and sharing them with the relevant stakeholders. It is important to provide a clear and concise summary of the project's progress and outcomes.

7. The seventh step is to reflect on the project. This involves taking time to think about what went well and what could have been done better. It is important to learn from the experience and apply the lessons learned to future projects.

8. The eighth step is to celebrate the success of the project. This involves recognizing the achievements of the team and sharing the good news with stakeholders. It is important to take time to appreciate the hard work and dedication of everyone involved.

9. The final step is to close the project. This involves ensuring that all tasks are completed and that the project is formally closed. It is important to document the final status of the project and provide a clear end point.

DER DRUCK

Auf der Venus beträgt der Druck 92 bar. Er ist **90-mal höher** als der der Erde.

Aber wenn man **höher** steigt, beginnt sich der Druck zu **reduzieren**.
